

Office Management System

A centralized web-based platform to manage employees, tasks, leave & notifications

Presented to: CTO Review | April 2026

Problem Statement

No centralized tracking

Tasks assigned verbally — nothing is recorded or monitored.

Manual processes

Attendance, leave, and task status are tracked on paper or spreadsheets.

No visibility for managers

No way to know what's pending, who's blocked, or who is on leave.

Lack of transparency

Employees don't have a clear view of their tasks or deadlines.

Current State

Task tracking

Paper/verbal

Attendance

Manual register

Leave requests

Email/verbal

Reports

None

Notifications

None

Proposed Solution

Role-Based Access

Admin, Manager, Employee — each sees only what they need.

Centralized Data

Single database for employees, tasks, leave, and notifications.

Real-Time Updates

Task status updates instantly visible to managers.

Automated Alerts

ENS (Employee Notification System) for upcoming tasks & leave.

Web-Based

Accessible from any browser — no installation needed.

Secure Login

JWT-based authentication with forgot-password flow.

Key Features

Employee Management

Add, view, edit employees. Category tagging: Intern, HR, System, Resources. Store ID, name, email, contact.

Task Assignment & Tracking

Assign tasks with due dates. Track status: Pending / Complete / Not Done. View per employee.

Leave Management

Employees apply for leave. Manager approves/rejects. Status tracked in real time.

ENS — Notifications

Employee Notification System shows upcoming tasks, leave status, and alerts on the dashboard.

System Architecture

Frontend (React.js)

Login · Dashboard · Employee · Task · Leave pages

Backend (Django REST API)

Auth · Employee CRUD · Task API · Leave API · Notification API

Database (MySQL)

users · tasks · leave_requests · notifications tables

JWT Authentication

SMTP Email (Forgot Password)

Role-Based Access Control

Database Design

users	tasks	leave_requests	notifications
id (PK)	id (PK)	id (PK)	id (PK)
empld	empld (FK)	empld (FK)	empld (FK)
name	taskName	leaveType	message
email	dueDate	fromDate	type
contact	assignedBy	toDate	isRead
password	status	status	createdAt
category			
role			

Primary Key

Foreign Key

User Roles & Permissions

Admin	Manager	Employee
✓ Full system access	✓ Assign & track tasks	✓ View own tasks
✓ Add / remove employees	✓ View team status	✓ Update task status
✓ Manage all tasks	✓ Approve leave requests	✓ Apply for leave
✓ View all reports	✓ Access team dashboard	✓ View notifications
✓ Manage user roles	N/A	N/A

Website Pages — Sitemap

Login Page	Dashboard	Employee Module	Task Module	Leave & Alerts
/login	/dashboard	/employees	/tasks	/leave
EmpId input	Task summary	Employee table	Task list by emp	Apply for leave
Password input	Quick stats	Add / Edit / Delete	Assign task form	Leave status
Login button	ENS panel	Category filter	Due date picker	Notifications list
Forgot Password link	Upcoming tasks	Search by name	Status dropdown	ENS bell icon

Build Plan — Phase 1 vs Phase 2

Phase 1	Current Build
Week 1	DB Schema + Setup Create all 4 tables in MySQL. Setup Django project and React app.
Week 2	Auth Module Login page, JWT auth, role-based routing, forgot-password flow.
Week 3	Employee CRUD Employee table UI, add/edit/delete, category tagging.
Week 4	Task Module Assign tasks, due dates, status tracking (pending/complete/not done).
Week 5	Leave & ENS Leave requests, approval flow, notification panel on dashboard.

Phase 2	Future Scope
	Email Notifications SMTP alerts for task deadlines & leave approvals.
	Analytics Dashboard Charts showing task completion rates, attendance.
	Mobile App React Native app for employee self-service.

Conclusion

Solves real problems

No more verbal task assignment or paper-based tracking.

Clear for all users

Role-based views — every user sees exactly what they need.

Ready to build

5-week phase 1 plan with a clear DB schema and page structure.

Scalable

Phase 2 adds analytics, email alerts, and mobile app support.

Thank You — Let's Build It
