

Cybersecurity Solutions for IT & SaaS Companies Protecting systems, applications, and user data

Agenda: About Dciphers, IT & SaaS basics, Cybersecurity challenges, Real cyber attacks, Security gaps, Architecture, Solutions, Why Dciphers

About Dciphers: Helps companies protect and improve IT systems. Services include cybersecurity, network security, application security, monitoring, vulnerability checking

Technology Partners: Palo Alto Networks, Fortinet, Trend Micro, Tenable, Juniper Networks

Clients: Government: ONGC, PGCIL, NHAI Private: Nykaa, HCL, Havells

What is SaaS: Software used through internet without installing. Features: cloud-based, accessible anywhere, scalable, subscription

Examples: Salesforce, Dropbox, Zoom

Cybersecurity Challenges: Data leaks, weak APIs, wrong cloud settings, insider threats, password theft, lack of monitoring

Real Attacks: Snowflake (data leak), Kaseya (ransomware affecting 1000+ companies)

More Incidents: SolarWinds (malware update), Dropbox (tool access risk)

Security Gaps: Wrong cloud setup, unsecured APIs, no monitoring, stolen passwords, insider misuse, weak login security

Architecture: Multi-layer security: network, device, application, access control, cloud, monitoring

Network Security: Firewalls, attack detection, secure access

Endpoint Security: Protect laptops/servers, malware protection, monitoring

Cloud & Vulnerability: Find weaknesses, secure AWS, Azure, Google Cloud

Why Dciphers: Complete solution, best tech, early threat detection, scalable, fast response

Conclusion: Cyber risks growing. Attacks cause money loss, disruption, trust loss, brand damage

Final: Cybersecurity is important for digital business. Dciphers builds strong security
